

INTEGRATED READINESS CALCULATION (IRC)

18 Aug 2004

Background:

Initiative was introduced during the Feb 04 MRIPT and was received with mixed reviews.

The basic concept, as described in the attached Point Paper (17 Mar 04), is to use SASSY Authorized (via LIMIS), SASSY On Hand, and MIMMS / A2P maintenance records to compute readiness within MERIT.

Major concern was how to replace RM4 remarks, considered critical by MARFORS (not a problem in A2P).

UIC to AAC match is critical to readiness accuracy with IRC. UIC / AAC discrepancies will prevent readiness computation. For example, there are cases where different UICs are using the same AAC for requisitioning parts.

II MEF wants to proceed with IRC after release of MERIT version 1.2.4.0 (includes A2P drill down capability).

Update

RM4 remarks issue has not been resolved for MIMMS users.

II MEF considering options to revert from A2P to MIMMS and SASSY. If this is imminent, II MEF will have the same issues as MIMMS users.

Initial IRC implementation will now only include the non-reportable TAMCNs. Requirement submitted to CTC with target date of Dec 04.

The plan is to present the results of the Non-Reportable TAMCN IRC initiative at the next scheduled MRIPT meeting for discussion on how and when to include the reportable TAMCNs in the IRC process.
